

Practice before the conversation counts.

AI buyer simulation, evidence-based coaching, and manager-led readiness in one workspace.

THE COMPLETE PRACTICE-TO-COACHING LOOP

01 Persona Lab

Build realistic buyers from structured role, KPI, pain, objection, decision-process, and communication metrics.

02 Transcript intelligence

Paste or upload customer conversations, redact sensitive details, extract patterns, review evidence, and approve reusable personas.

03 Adaptive AI buyers

Practice against guarded, skeptical, time-conscious buyers that reveal information only after relevant discovery.

04 Text and voice practice

Run persistent text sessions or low-latency WebRTC voice calls with captions, interruption, mute, timer, and saved transcripts.

05 Evidence-first scoring

Use manager-owned 0-4 anchors, weights totaling 100, transcript citations, deterministic math, and insufficient-evidence safeguards.

06 Manager coaching OS

Prioritize review moments, assign focused drills, track readiness by role, calibrate AI judgment, and identify team-wide skill gaps.

BUILT FOR SALES LEADERS

Less manager administration. More targeted practice. Clear proof of behavior change.

Secure multi-tenant architecture, immutable versions, role-aware access, cost controls, and deterministic mock mode.
